

The miniTwin Safety Light Curtain

Minivation:
the smallest Light Curtain from SICK.

Minivation – 120 mm, all inclusive: integrated intelligence, minimised format.

Minivation is an innovation in miniature housings: for the first time, sender and receiver elements have been integrated in an extremely compact housing – in the miniTwin light curtain. Miniaturisation optimises machine integration, permits cost-cutting standardisation and simplifies handling.

Limited space in the machinery?

miniTwin is the perfect answer to current requirements in machine construction. The trend is towards increasingly compact machines in electronic production and in the automation of handling and assembly. In addition to protecting service and access openings on fully automated CNC-controlled machines, miniTwin also fully exploits its size advantage in semi-automated workplaces.

Safety for many industries

The miniTwin light curtain provides innovative safety solutions for flexible serial production of small batch sizes and for low-level serial production. Many industrial sectors can profit from this:

- suppliers to the automotive and aerospace industries
- the electronics industry
- the pharmaceutical industry
- food and beverages production
- the packaging machine industry

Miniaturisation creates space

- Very compact housing
- No blind zones
- Flexible machine integration
- More ergonomic work processes

Standardisation reduces costs

- MiniTwin is both sender and receiver unit
- MiniTwin offers both stand-alone and cascade use
- Device connection with 5-pin M12 standard cable with full functional scope

Simplest handling for maximum availability

- Simplified installation through application-specific bracket
- LED-guided start-up
- Rapid alignment through coloured LEDs
- Rapid, easy wiring
- Intelligent configuration without software

There is space in even the smallest of gaps: space for innovation through maximum miniaturisation.

miniTwin's miniaturisation opens up new solutions for space-saving machine integration because savings in mounting space and the size of production areas are becoming increasingly important. And the optimisation of work processes thanks to ergonomic workplace design offers even more potentials.

Small housing for optimum machine design

miniTwin enables safety concepts that permit compact machine design. Optimum machine integration reduces safety distances and minimises the size of production areas.

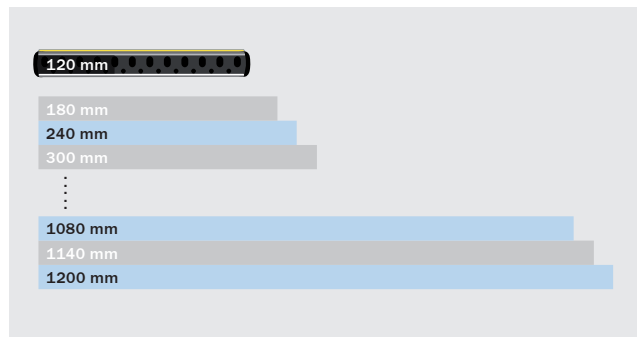

Productivity increases through optimised work processes

The miniTwin safety light curtain is suitable for every mounting type and any machine design. Cycle and equipping times can be optimised without interfering with the operator's work process. The short response time and high resolution permit short safety distances between the light curtain and the hazardous movement. Free access and minimised safety distances accelerate processes and increase the availability of production equipment.

Small housing for great safety

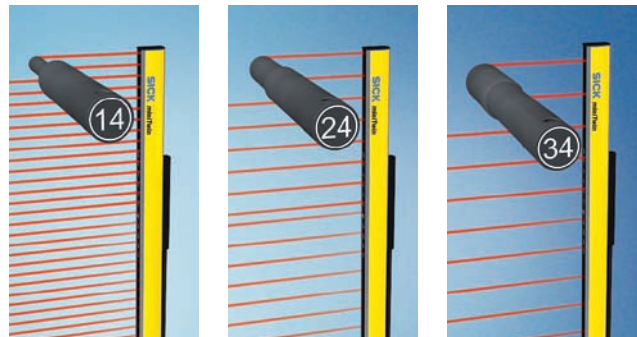

The extremely compact housing of the miniTwin has permitted the creation of a safety light curtain that has no blind zones at either end of the housing. This means that a consistent high-resolution protective field stretches to the edges and, with cascading, the protective field extends beyond the corners.

Graduated lengths in 60 mm increments

Scalable protective field heights and three resolutions

The shortest miniTwin stick measures just 120 mm, the protective field height of each individual miniTwin stick is scalable up to a height of 1,200 mm in increments of 60 mm. Each of these miniTwin stick lengths is available with resolutions of 14 mm, 24 mm and 34 mm. The safety light curtain can thus be ideally adapted to individual requirements.

Resolutions of 14 mm, 24 mm and 34 mm

An endless story: sender = receiver = cascading.

miniTwin brings a new uniformity to safety technology. The result of this standardisation is fewer components and thus substantially less ordering, logistical, handling and service effort.

One stick does the trick: the miniTwin stick

The miniTwin safety light curtain consists of two identical miniTwin sticks of the same size. Each miniTwin stick contains both the sender and receiver elements, each symmetrically mounted in one half of a housing. The safe light grid is created by mounting two miniTwin sticks offset by 180° so that the sender and receiver are located opposite one another. In the case of cascading, the particular system plug used (with one or two outgoing cables) defines which miniTwin stick acts as the host and which is the guest – and they automatically configure themselves.

Cables and plugs are also standardised

The system plug on the back of the miniTwin housing is symmetrically constructed and can be mounted with the cable exit facing upwards or downwards depending on the particular installation situation. Cascading connections and integration in the safety controller always take place with a 5-pin M12 standard plug via reasonably priced 5-wire cable – with full functionality: reset and external device monitoring.

SICK *miniTwin*

SICK *miniTwin*

**Standardisation with the miniTwin stick –
for many protective field shapes**

Whether as a stand-alone variant or as a cascade:
the miniTwin meets all requirements:

- profile frame mounting with two miniTwin sticks
- L-shaped application with four miniTwin sticks
- U-shaped application with six miniTwin sticks

Whichever way you look at it:
the miniTwin can be mounted anywhere
and in any orientation.

Development of the miniTwin focused on easy handling. Application-specific brackets simplify installation, and integrated LED indicators accelerate commissioning and diagnosis.

O-Fix brackets for flat mounting

- Mounting on the device ends for flat installation on profile frames or in machine niches
- 20 mm resolution at housing ends (incl. O-Fix bracket)

C- and L-Fix brackets for vertical mounting

- Mounting on profile or machine frames
- For fixed positioning
- 14 mm resolution at housing ends
- No blind zones

C-Fix brackets for cascade structures around corners

- Space-saving corner mounting for cascade structures
- Fixing on device profile
- 14 mm resolution at housing ends
- No blind zones

Blue LEDs simplify alignment: the more blue LEDs light up, the better the alignment.

LED indicators for alignment, configuration, status and diagnosis

Each miniTwin stick unit has an integrated display with eleven coloured LEDs. The information provided by this practical indicator concept can be appreciated intuitively: constantly lit LEDs act as a status indicator, blinking LEDs show that an action is necessary. Faults are signalled via a red LED.

Reset (RES) and external device monitoring (EDM)

Configuration of the miniTwin light curtain's reset and external device monitoring takes place after electrical connection during the power-up cycle – automatically for EDM and by pressing a button in the case of RES. The configuration is stored and can be reset if required.

Power supply, U _v at device ³⁾	Minimum 19.2 V typically 24 V maximum 28.8 V
Switching outputs (OSSD)	300 mA, PNP semiconductor, short-circuited protected ⁴⁾
Response time Stand-alone, 24 mm and 34 mm resolution Stand-alone, 14 mm resolution Additional time for cascade of 4 miniTwin sticks Additional time for cascade of 6 miniTwin sticks	≤ 13 ms ≤ 14 ms for protection field heights from 120–720 mm ≤ 17 ms for protection field heights from 780–1200 mm 2 ms 4 ms

Operating data	
System plug	M12x4 + FE plug
Cable length ⁵⁾	Maximum 20 m
Cable cross-section	0.34 mm ²
Operating ambient temperature	Minimum -10 °C maximum +55 °C
Air humidity (non-condensing)	Minimum 15 % maximum 95 %
Storage temperature	Minimal -25 °C maximum +70 °C
Housing cross-section	15 mm × 24 mm
Dimensions incl. plug	15 mm × 32 mm
Vibration resistance	5 g, 10–55 Hz acc. to IEC 60 068-2-6
Shock resistance	10 g/16 ms acc. to IEC 60 068-2-29

¹⁾ Only valid for conformity assumption until 29.11.2009. Thereafter only the successor standard EN ISO 13 849-1:2006 can be applied.

²⁾ Safe extra-low voltage SELV/PELV.

³⁾ In order to comply with the requirements of the relevant product standards (e.g. IEC 61 496-1), the device's external voltage supply (SELV) must be capable of bridging for the permitted temporary power failure of 20 ms according to EN 60 204-1.

⁴⁾ Applies for voltages within the range of between -3 V and +30 V.

⁵⁾ According to IEC 61 131-2.

⁶⁾ The Performance Level does not contain any specific requirements on aspects such as the optical characteristics. You will find more detailed information on this topic in www.sick-safetyplus.com, Safety Know-how.

Ordering the miniTwin2

The “Stand-alone” or “End-device cascade” miniTwin-stick package

Scope of delivery ¹⁾	Length ²⁾ mm	14 mm resolution		24 mm resolution		34 mm resolution

Connection cable depending on the protection field height:

Protection field height 120–180 mm:	160 mm connection cable
Protection field height 240–540 mm:	350 mm connection cable
Protection field height 600–1200 mm:	700 mm connection cable

Accessories

	Part No.	Type	Description
	System connection		
	6008899	DOL-1205-G02M	Connection cable 2 m; socket M12 x 5 and open cable end
	6009868	DOL-1205-G05M	Connection cable 5 m; socket M12 x 5 and open cable end
	6010544	DOL-1205-G10MC	Connection cable 10 m; socket M12 x 5 and open cable end
	6029215	DOL-1205-G15MC	Connection cable 15 m; socket M12 x 5 and open cable end
	6022083	STE-1205-G	Cable plug M12 x 5, straight, adaptable
	Cascade enlargement cable		
	6029280	DSL-1205-G01MC	Connecting cable 1 m; socket M12 x 5 and plug M12 x 5
	6025931	DSL-1205-G02MC	Connecting cable 2 m; socket M12 x 5 and plug M12 x 5
	Flexi Classic safety controller		
	6026136	UE410-MU3T5	4 inputs, 4 PNP semiconductor outputs, 24 V DC, delay 0...5 s, removable terminals
	UE10-2FG and UE12-2FG safety relays with positively driven contacts		
	1043915	UE10-2FG	with 2 safety outputs
	1043917	UE12-2FG	with 2 safety outputs, cascable

¹⁾ Scope of delivery: Operating Instructions on CD-ROM, test rod, test instruction sticker.
²⁾ Consistent with the protection field height S in dimensional drawing on page 14.

Complete system for effective accident prevention and human protection

The plus for greater safety and efficiency: safetyPLUS®. SICK has been developing safety innovations for 60 years. As a complete supplier with the world's most comprehensive safety portfolio, we set international standards in performance and functionality. This makes us the leading supplier of trailblazing products and services covering all aspects of industrial safety.

Experience and competence

safetyPLUS® forms the ideal wide-ranging safety concept from a unique range of performance, because the safety of persons and machines largely depends on the correct application of complex directives and standards. Another advantage: a comprehensive safety concept based on safetyPLUS® saves time and money.

State-of-the-art technology and system openness

We offer complete safety applications from a diverse product portfolio. Particularly important: SICK's typical openness provides smooth integration in all safety and system environments.

EtherNet

User-friendly and clever safety solutions

Trendsetting products and application-oriented functions: safetyPLUS® offers a unique all-round safety package from safety switches, through opto-electronic sensors and safe camera systems, to safe controller solutions and networks. And every SICK technology is fundamentally as easy as possible in practical use and remains up-to-date for years to come.

All-embracing services

You can be confident that legal demands are met: CE conformity advice, application support, assistance during commissioning, accredited inspection services, product support, modernisation, service contracts, training. From the initial idea to running maintenance: experts from SICK accompany you during every phase of a project.

Our Business Segment Expertise

Factory automation

With its intelligent sensors, safety systems, and automatic identification applications, SICK provides comprehensive solutions for factory automation.

- Non-contact detecting, counting, classifying, and positioning of any type of object
- Accident protection and personal safety using sensors, as well as safety software and services

Logistics automation

Sensors made by SICK form the basis for automating material flows and the optimisation of sorting and warehousing processes.

- Automated identification with bar-code and RFID reading devices for the purpose of sorting and target control in industrial material flow
- Detecting volume, position, and contours of objects and surroundings with laser measurement systems

Process automation

Optimised system solutions from SICK ensure efficient acquisition of environmental and process data in many industrial processes.

- Precise measurement of gases, liquids and dust concentrations for continuous monitoring of emissions and the acquisition of process data in production processes
- Gas flow measurements with maximum accuracy thanks to compact gas metres
