

Smart Laser Sensor

ZX-L *Unique Plug & Play Measurement Concept for Precise Measurement*

A multitude of "smart" functions packed in a small amplifier. Full line-up of heads for different detection methods and micron detection performance

ZX-L

Features

The world's smallest and lightest laser sensor.

It is the world's lightest. A body size similar to a photoelectric sensor permits space conservation and solves installation space problems.

Naturally, we have also achieved a high-speed response on the same level as a photoelectric sensor.

* High-speed sampling: 0.15 ms (response speed: 0.3 ms)

Platform architecture as an optimum solution

Platform architecture allows users to configure a variety range of sensor-heads to one amplifier.

Plug & Play provides easy sensorhead replacement and easy maintenance.

Our line-up includes 8 reflective-type models and 3 Through-beam-type models.

Reflective Models Class 2 visible-light laser

Minute work is detected by a spot beam, and regular work is detected by a line beam. Smart adaptation to meet the needs of the application. Furthermore, the system seamlessly covers a measurement range of 28 mm to 500 mm.

Through-beam Models Class 1 visible-light laser

High-precision positioning is accomplished with a 1 mm dia. spot beam, and area detection is accomplished with a 5 mm width / 10 mm width screen beam.

Measurement width and distance range (Resolution: 4mm)

Many useful functions are provided.

Calculation settings that eliminate the need for a digital panel meter Patent pending

A calculation unit can be inserted between two amplifiers to display the calculation results of two sensor units on one of the amplifiers. Settings are accomplished by simply entering the necessary parameters in one of the amplifiers.

Includes a sensor life monitor.

The laser diode (LD) life is detected automatically and the operator alerted.

When LD deterioration is detected, the sub-display alerts you. This gives you time to take action before the LD dies.

Top priority is given to easy operation.

Sophisticated functions and high performance, with ease of use. This is a key feature of the ZX-L-Series. The interface comes from our E3X-DA-N* Digital Fiber Amplifier. Feel how simple it is to operate.

Obtain the resolution with ease Patent pending

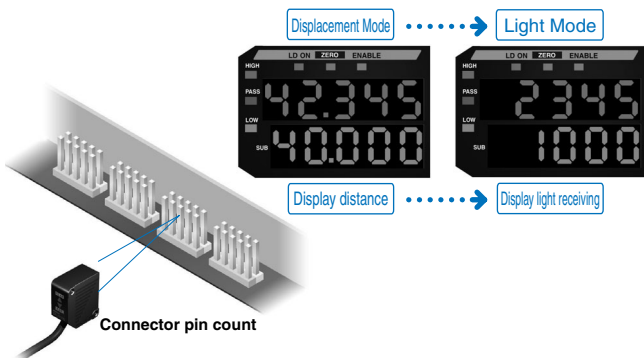

Simply perform detection of the work you wish to test, and you can check the resolution. The resolution is displayed so you can check how much fluctuation there is to the threshold setting and decide whether detection is possible with certitude.

Reflective Models

Light intensity mode for high-performance laser photoelectric detection

Light intensity detection is possible using the minute spot of the laser beam. The sensor can be used not only as a displacement meter, but also as a high-precision laser photoelectric sensor for detection of minute work with a background object and color difference. Select displacement mode or light intensity mode as appropriate for the application to establish the optimum function settings.

Through-beam Models

Multiple teaching functions.

Positioning / 2-point / auto-matching

Includes three types of teaching functions on the same level as a photoelectric sensor.

-  **Positioning teaching**
Ideal for high-precision positioning applications.
-  **Two-point teaching**
Ideal for detection of minute level differences between two points.
-  **Automatic teaching**
Ideal for applications where teaching is performed without stopping the work.

Install in any direction.

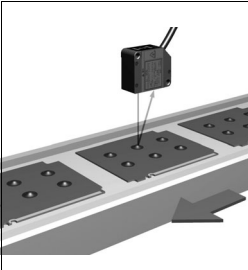

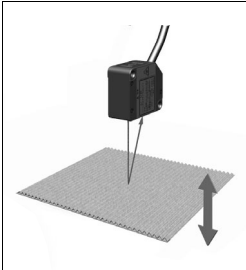

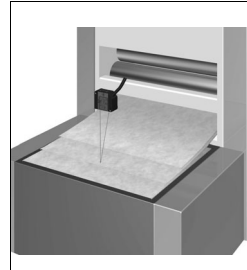

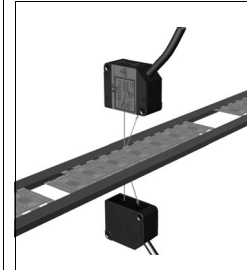

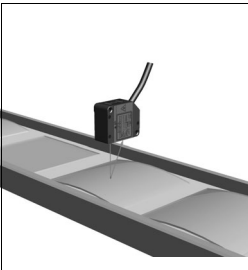

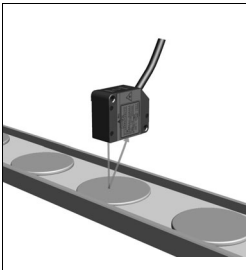

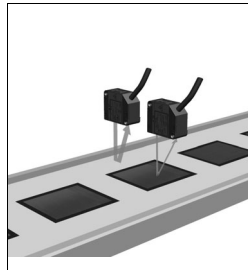

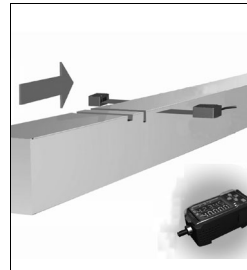

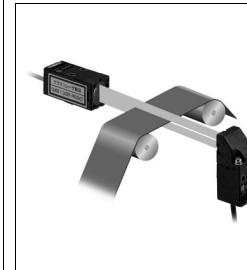

A side viewer attachment (optional) can be installed to enable various installations

Wide variety of easy-to-use functions.

Scaling, display reverse, display off mode, ECO mode, change number of display digits, measurement processing (various timer functions and hold functions), threshold value settings, input/output settings, mutual interference (when using a computing unit), function lock, initial reset, zero reset, differential function, sensitivity selection, monitor focus, etc.

Application

<p>NORMAL Height measurement of a minute object</p> 	<p>POSITION Face positioning</p> 	<p>P-P Face swing/eccentricity</p> 	<p>EDGE Sheet count</p> 	<p>THICK Thickness of object with flutter</p> 
<p>PEAK Detection of warping / level difference</p> 	<p>SELF Continuous measurement</p> 	<p>A-B Detection of presence of thin object</p> 	<p>APERTURE Gap detection</p> 	<p>OUTSIDE Shape detection</p> 

Features

Connect to a computer for full use of sensor performance.

Use the computer monitor screen for enhanced panel display. Easy processing of detection results such as waveform monitor and data logging results, which used to make system configuration more easy.

Waveform monitoring function

Easy monitoring of waveforms, which was previously only possible with an oscilloscope. Plenty of easy-to-use functions, such as drag and drop threshold value setting.

Waveform monitoring

Quality control as you desire.

Data logging

Log detection data and manage a status history for effective and efficient quality control and implementation of countermeasures for problems.

Settings are supported by a list display

Settings that are complicated if the amplifier panel must be used can be easily accomplished by referring to the Function menu. The settings can also be easily imported to and exported from a text editor.

Summary of PC software specifications

Digital numerical value monitoring

- Tolerance direct threshold value setting
- Various teaching settings

Waveform monitoring

- Waveform collection
- Waveform observation/editing
- Waveform saving/reading

Data logging

- Various collection condition settings
- Supports Microsoft Excel

Configuration function

- Amplifier unit function settings (observation scaling, input scaling, etc.)
- Saving/reading of amplifier setting conditions

**Microsoft Excel is either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

*1. Beam diameter: This is the value of the measurement center distance (actual value), and is defined at 1/e² (13.5%) of the central light intensity. If there is stray light outside, the defined area and the area around the object has a higher reflectance than the object.

*2. Resolution: Indicates the amount of fluctuation (±3%) in the linear output when connected to the ZX-LDA. (The measured value when the average count of the ZX-LDA is set to 4,096 and our standard object (white ceramic) is used for the central distance.) This indicates the repeatability precision when the work is in a static state, and does indicate the distance precision. The resolution performance may not be satisfactory in a strong electromagnetic field.

*3. Linearity: This indicates the error with respect to the ideal straight line of the displacement output when measuring our standard object.

*4. Temperature characteristic: The value when the distance between the sensor and the object (our standard object) is fixed using an aluminum jig. (Measured at the measurement center distance.)

Note: When an object has a high reflectance, detection errors are possible outside the measurement range.

Connection

Amplifier Units

- Note: 1. In particular, when high resolution is necessary, provide a stable power source separate from other power systems.
 2. Damage may result if not wired correctly. (In particular, do not allow the linear output to contact other wires.)
 3. Green (0 V) is for the power supply. The outer covering of the shield wire (linear GND) is used for linear output along with the black wire (linear output). Even if you will not be using the linear output, connect the linear GND to GND (0 V).

Precautions

Warning

Laser safety

Safety measures are required for laser devices both in Japan and abroad. Brief explanations of three cases are given below, including use in Japan and assembling in Japan and then exporting to other countries.

Europe

The ZX-L-Series Sensor Heads are Class 1 and Class 2 Laser Products according to EN 60825-1 (IEC825-1).
(The outline is given in the following table.)

Summary of user precautions

Requirements subclause	Classification						
	Class 1	Class 1M	Class 2	Class 2M	Class 3R	Class 3B	Class 4
Laser safety iffucer 10.1	Not required but recommended for applications that involve direct viewing of the laser beam				Not required for visible emission Required for non-visible emission	Required	
Remote interlock 10.2	Not required					Connect to room or door circuits	
Key control 10.3	Not required					Remove key when not in use	
Beam attenuator	Not required					When in use prevents inadvertent exposure	
Emission indicator device	Not required				Indicates laser is energized for nonvisible wavelengths	Indicates laser is energized	
Warning signs 10.5	Not required					Follow precautions on warning signs	
Beam path 10.6	Not required	Class 1M *1 as for Class 3B	Not required	Class 2M *2 as for Class 3B	Terminate beam at end of useful length		
Specular reflection 10.7	No requirements	Class 1M *1 as for Class 3B	No requirements	Class 2M *2 as for Class 3B	Prevent unintentional reflections		
Eye protection 10.8	No requirements					Required if engineering and administrative procedures not practicable and MPE exceeded	
Protective clothing 10.9	No requirements					Sometimes required	Specific requirements
Training 10.10	No requirements	Class 1M *1 as for Class 3R	No requirements	Class 2M *2 as for Class 3R	Required for all operator and maintenance personnel		

*1. Class 1M laser products that failed condition 1 of table 10. Not required for Class 1M laser products that failed condition 2 of table 10.

*2. Class 2M laser products that failed condition of table 10. Not required for Class 2M laser products that failed condition 2 of table 10.

Note: This table is intended to provide a convenient summary of precautions. See text of this standard for complete precautions.

ZX-LD□□□/ZX-LD30V□

Classification of reflective-type sensor heads

Class 2

Classification of reflective-type sensor head of ZX-LT□□□

Class 1

Laser-related labeling

The warning label at right is attached to the side of the sensor head.

Handling Instructions

The ZX-LD□□□/ZX-LD30V□ emits visible laser light. Do not look directly at the light. Terminate the light path of the laser beam before use. If a reflective mirror surface is in the light path, ensure that the reflected light path is enclosed in the beam. In cases where the light path must be open, ensure that it is kept away from eye-height.

(U.S.A.)

Exports of products equipped with this device to the U.S.A. are governed by the laser standards of the Food and Drug Administration of the U.S.A.

The ZX-L-Series Laser Series is classified as Class I and Class II device according to FDA (21 CFR1040.10).

Please inquire for detailed information on exporting to the U.S.A..

(Countries other than the U.S.A.)

- ZX-LD□□/ZX-LD30V@ reflective-type (displacement) sensor head: In countries other than Japan and the U.S.A., replace the warning label with the provided English label.
- For the ZX-LT□□□ transmissive-type (displacement) sensor head, the warning label already includes English, thus replacement is not necessary.
- With respect to exports to Europe, a different standard exists, Europe EN60825.

Correct Use

Design

Object

Some object materials and forms may not permit measurement, or may reduce the accuracy of measurement (transparent materials or materials with an extremely low reflectance; steeply inclined objects, etc.).

Power Supply and Wiring

- Do not connect or disconnect the connector while powered. Damage may result.
- Allow the system to warm up for about 10 minutes after turning on the power.
- Upon completed wiring, verify that the power source is wired correctly, that there are no incorrect connections that will cause load shorts, and that the load current is appropriate before turning on the power. Incorrect wiring may result in damage.
- When extending the cable, ensure that the overall length does not exceed 10 m from both the sensor head and the amplifier unit. If you need to extend the cable from the sensor head, use the optional extension cable (ZX-XC□A). For wiring from the amplifier unit, use the same type of shielded cable.
- If the power line is subject to surges, connect a surge protector.
- If you are using a computing unit, connect the linear GND terminals of the amplifier units.

Compatibility

The sensor head and amplifier unit are compatible. A sensor head purchased later can also be used.

Mutual Interference

This sensor head allows the amplifier units to be used in conjunction by connecting a computing unit (ZX-CAL) between the amplifier units.

Cleaning

Do not use thinner, benzene, acetone, or kerosene, or similar chemicals.
